

ASTech Guiding Principles of Quality

About Us

With our products, solutions and validation concepts, we enable our customers to implement driving assisted and autonomous driving functions in series production as quickly as possible. Our expertise thus spans the entire development of integral safety systems. In addition to function and software development and simulation and test expertise, this includes tool and process development in the field of integral vehicle safety – all from a single source.

Quality Demand

The success of our company is closely tied to the quality of our products and services. We commit to maintaining and continually improving our process-oriented quality management system in line with ISO 9001:2015. We ensure that the products and services that we deliver meet the defined requirements with respect to quality and safety and exceed the expectations of the customers. We work solely with suppliers who share our demand for quality and we also advertise this to our customers. By utilizing sophisticated, state-of-the-art development methods, we retain our existing core expertise and thus serve as a driver of innovation within the VW Group. Above all, it is our highly-qualified international employees who make a significant contribution to the success of each and every project through their dedication and commitment. For this reason the leadership team ensures that our employees possess the required expertise and skills. We rectify deficiencies with speed and sustainability and take advantage of the opportunities for continuous quality improvement. We promote quality awareness at ASTech through structures and resources.

Declaration of Commitment

Ensuring the quality of our products and services requires the systematic utilization of our quality management system. Through the binding implementation of the quality management system, the entire leadership team fulfills its organizational and oversight duties. Our employees carry out their activities in line with the guiding principles of quality, and support each other in the implementation of the requirements. Each of us at ASTech therefore sees to it that systematic quality deficiencies are actively and consistently identified, analyzed and sustainably remedied.
